The preliminary amendment filed 29 September 2005 has been entered. Claims 1-7 are currently pending and under examination herein.

Claim 1 is objected to because of the following informalities: a typographical error is noted in line 3, viz., "copoloymer". Appropriate correction is required.

Claims 1-7 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The reference in claim 1 to "said fraction insoluble in xylene at 25°C has an intrinsic viscosity from 1.8 to 4.2 dl/g" is confusing and appears in error inasmuch as the supporting disclosure only mentions such viscosity values in characterizing the fraction *soluble* in xylene at 25°C. See the Specification at page 2, line 8 and page 16, subparagraph B) and *Cf.* claim 1, final three lines. Clarification and appropriate correction are required.

The prior art made of record and not relied upon is considered pertinent to applicants' disclosure. Pelliconi et al is cited as pertinent to polymer compositions comprising (A) from 70 to 98 parts by weight of a crystalline propylene homopolymer or crystalline random copolymer of propylene with ethylene and/or C₄-C₁₀ α -olefins, containing from 0.5 to 10 % by weight of ethylene and/or α -olefins [fraction (A)]; and (B)

from 2 to 30 parts by weight of elastomeric copolymer of ethylene with one or more C₄-C₁₀ α -olefins, containing from 60 to 85 % by weight of ethylene, and partially soluble in xylene at 25°C [fraction (B)] (col. 2, lines 15+). In all the specifically disclosed embodiments, ethylene content of fraction (B) is 65 or 70 wt% (Table 3), and therefore the corresponding α -olefin content (35 or 30 wt%) is at least 5 wt% below the lower endpoint recited in applicants' claim 1 for weight % of propylene or α -olefin in component (B) of the claimed composition. Further, the reference is silent as to TREF profile and therefore provides no basis to expect that a fraction (B) copolymer containing 60 wt% ethylene would afford a polymer composition possessing the TREF profile requisite to the present invention.

Claims 1-7 are free of the prior art of record.
